

HAVE YOU HEARD?

The

SENIOR FRIENDLY CARE

FRAMEWORK

is on the horizon

The Senior Friendly Hospital (SFH) Framework has proven to be very valuable in stimulating change in hospitals to improve care for older adults. Building on this success, the time is right for re-imagining this framework as one that will be applicable wherever healthcare is delivered, not just in hospitals. The evolution of the SFH framework into the Senior Friendly Care (sfCare) framework will provide the foundation for new models of care, standards, indicators, training, and toolkits that will focus on the collaborative delivery of senior friendly care, across the healthcare continuum. **LAUNCHING FALL 2017.**

The Framework Domains

Organizational Support

Processes of Care

Emotional and Behavioural Environment

Ethics in Clinical Care and Research

Physical Environment
